

Andriod Is Upping Their Game on Wireless Headphones, And It Could Be Huge

Not sure about your family, but my family lives and dies by their wireless headphones. We use them to watch videos, listen to music while working out, and to answer calls in between. The audio connects back and forth easily between devices without much thought.

What I didn't know, was that, using Bluetooth wireless headphones for Android users way different and more cumbersome. It wasn't until I came across a *July 21, 2022 Digital Trends* article, "Andriod is stealing one of the best iPhone features for wireless headphones" written by Peter Hunt Szpytek, had even occurred to me that a feature my family would use everyday would make that much of a difference.

This intrigued me. "What iPhone feature of was Google trying to emulate for Andriod users?" Since I'm in the business of knowing technology, I had to learn more, so I could pass this exciting news to others.

Audio Switching. Two words that I had never heard before. A feature my family and many other iPhone users, have enjoyed over the years, and frankly, taken for granted. Audio switching has been easy, breezy audio technology in my world, allowing me and other users have seamless audio with Bluetooth wireless headphones while going from one device to the next, like from a laptop to a phone. This hasn't been the case for Andriod users.

AUGUST 10TH

MODERN DESIGN & NEW FEATURES

Check out the back for latest in CommandIQ news!

-Continued from the front-

Google is now expanding its Fast Pair technology to incorporate *audio switching*. Fast Pair, launched in 2017, has allowed Android users to pair 6.0 or newer devices to a Fast Pair-able accessory for quick and easy pairing without dealing phone settings.

What does this mean? Android users with newer Bluetooth wireless earbuds will now be able to go from watching a video on an Android tablet to listening to their favorite tunes on their Android phone, alerted by a notification request.

Android's audio switching will be rolled out to their *Pixel Buds Pro* first, then will support in select Sony and JBL wireless earbuds in the coming weeks.

Google has upped the audio game, as their newer wireless earbuds will work across other brands of devices with audio switching technology!

- Amy Ochs, Marketing

Surplus Vehicles for Sale by Sealed Bids

2012 Ford F150
118,760 miles
Valued at \$15,291

2006 Chevrolet Van
121,267 miles
Valued at \$11,268

**Bids must be sealed and received
by 5 p.m. on Friday, August 26, 2022.**

These vehicles are sold "As Is."

Mail or hand-deliver sealed bids to:
RC TECHNOLOGIES

Attn: Sealed Bid for Vehicle Name
205 Main Street, P. O. Box 197
New Effington, SD 57255

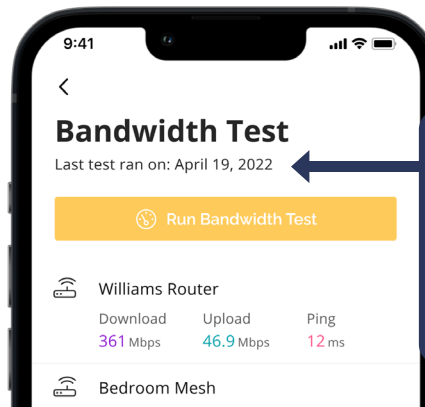

RC Technologies reserves the right to refuse all bids.

Hey CommandIQ Users!

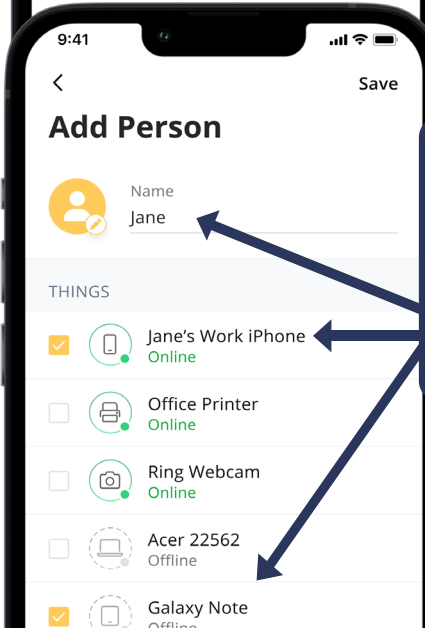

Here's a glimpse.

::COMING AUGUST 10TH::

Verify your speed
with the app.

Date & time stamped with
the last bandwidth speed
test you ran.

Knowing
what devices are **Online**
and what's **Offline**
even easier.

Also helpful in keeping track
of who devices belong to.

Need the majority of Internet,
during the day because you
Work from Home?

Want Video Streaming to take a
priority over someone's gaming?

Want Gaming a top priority?

**Press and hold the labels (Work,
Video & Music, Gaming, Browsing,
Files Transfers or P2P File
Sharing) to rearrange in an order
that suits you, highest priority
at top and lowest priority at
bottom.**

Traffic Priority via CommandIQ app, is an
ExperienceIQ feature. Try free for 90 days.
